Enabling digital transition part 2, A2B Electronics introduces the MyM, Micro Master Head End

A2B Electronics AB, the Swedish technology company that develops and manufactures products and technology for professional TV distribution, introduces at this years Anga Cable in Cologne, Germany, the MyM Micro Master Head End. The MyM is designed as a low cost, high quality solution for smaller networks. In MyM we have used our professional technology solutions in an extremely integrated package.

MyM is a new product line where the first product, MyM-3T, will start shipping in May this year to Key markets.

The MyM product line will later this year increase with versions for satellite and cable reception.

"As a technology provider we aim to cover a wide product portfolio and provide technology solutions in all segments", says Ari Miettinen, Sales and Marketing Manager at A2B Electronics, who continues, "The MyM Micro Master is a compilation of our latest technology platforms giving our customers the reliability and performance of our professional products, but with more "bang for the buck".

About the MyM Micro Master:

The MyM-3T Micro Master is a 3-channel Head End intended for use in small networks and contains following Key Features:

- DVB-T reception of two multiplexes
